

SEBASTIAN RUSSO

SOFTWARE ENGINEERING

CONTACT ME

- +49 176 74956410
- sebasruse03@gmail.com
- www.linkedin.com/in/sebastian-russo-a552602a0
- <https://github.com/Rouxxel>
- Berlin, Deutschland

HARD SKILLS

- Python
- Java
- React - TS
- C/C++
- C# - Unity
- HTML5 - CSS3 - JS
- Android studio - Flutter
- Github - Git
- Atlassian (Jira, Confluence)
- MySQL, PostgreSQL
- Powerpoint - Excel

SOFT SKILLS

- Communication skills
- Adaptability
- Attention to detail
- Team work - Collaboration
- Problem Solving

LANGUAGES

- English (Bilingual)
- German (A 1.2)
- Spanish (Native)
- French (B 1.1)

PROFILE/OBJECTIVES

Software Engineer based in Germany with hands-on experience building backend systems for real-time data processing and contributing to production-grade monitoring solutions. Strong foundation in Python and Java, with experience across full-stack development and ML/DL pipelines. Actively engaged in hackathons and technical workshops to stay current with evolving tools and practices.

WORK EXPERIENCE

Beeing

Fullstack developer

2026 - Present day

- Integrated and orchestrated multiple AI and audio providers, including Google Gemini, OpenRouter, ElevenLabs and Deepgram for LLM generation, TTS, STT and voice cloning.
- Developed and maintained a Next.js/React/TypeScript frontend and FastAPI/Python backend.
- Built an internal analytics and operations dashboard from scratch using React/Vite and FastAPI, providing metrics of users, sessions, AI generation, TTS providers, speech engines, costs, wellness, voice input and infrastructure.
- Integrated external APIs and infrastructure services including Vercel, Railway, Render, Supabase and ElevenLabs.
- Established and maintained CI/CD and security workflows using GitHub Actions, automated testing, dependency/security checks, secret scanning and deployment pipelines.
- Developed automated testing across the stack using pytest, Vitest and Playwright, covering backend services, frontend functionality and end-to-end.

Siemens AG

Backend developer for real-time monitoring systems

2024 - 2025

- Built Python-based Backend for processing high-frequency real-time sensor data with Pandas, NumPy, SciPy and Matplotlib for numerical analysis.
- Applied multithreading, logging and OOP principles to enhance performance, reliability, debugging code maintainability and overall system reliability.
- Developed modular backend components following clean code and OOP.
- Used Docker to containerize applications and ensure consistent deployment and development environments.
- Used Git/GitHub for version control and development workflows, including branch-based development and CI/CD pipeline.
- Designed system architecture and technical diagrams in Draw.io for data flows, system components and interactions.
- Contributed to technical documentation and system design discussions, translating engineering requirements into implementable components.

Langdrill (Startup)

UX/UI and Frontend developer (React + TS)

2025

- Developed the React/TypeScript frontend for an AI-enhanced educational platform, building responsive and reusable interfaces for core user workflows.
- Designed UI/UX concepts, wireframes, prototypes and high-fidelity interfaces in Figma, translating product requirements into functional frontend experiences.
- Designed and wired the frontend to REST APIs, integrating backend services for dynamic content, user interactions and application state.
- Implemented a component-based frontend architecture with reusable and maintainable React components.

SEBASTIAN RUSSO

SOFTWARE ENGINEERING

EDUCATION & PROJECTS

University of Europe for Applied Sciences

Software Engineering B.Sc.

2022 - 2025

- Studied core programming languages: Python, Java, C/C++, JS and Golang.
- Developed mobile apps with Flutter SDK (Dart) and webapp projects with HTML5, CSS3 and JS. Incorporating third-party APIs, Backend deployment (RESTful, Websockets), Frontend deployment and Cybersecurity measures.
- Experience with DevOps tools like Docker and VMs (Oracle).
- Practiced Agile development and SQA principles in Scrum and Kanban teams.
- Version control using Git and GitHub in all collaborative and solo projects.
- Researched ML (supervised and unsupervised) and DL (CNN) models.
- Designed UX/UI prototypes using Figma.
- Designed Software Architectures and documentations with draw.io

PERSONAL PROJECTS

<https://www.per-web-venzer.com/>

- Built multiple standalone games using Unity and C#, implementing custom game logic and RPG-style mechanics. Designed original sprites and assets, delivering fully self-contained applications.
 - Full-stack webapp for a Riot Games hackathon, integrating the official Riot Developer API, Python-based backend deployed on Render and a React/TS frontend deployed on Vercel, implementing an AI-driven coaching system.
 - Regular participant in AI-focused hackathons, sourcing datasets, building end-to-end ML pipelines, software architectures and full working apps.
 - Developed a cross-platform AI chatbot using Flutter (Dart), powered by Gemini 2.5 Flash API. Implemented a Python-based RESTful backend deployed on Render, with Supabase (PostgreSQL) for persistent storage.
 - Developed a self-contained mobile app using Flutter and Dart designed to analyze and scan the surrounding area for bluetooth and wifi devices and determine if someone is following you based on a score system that takes into account visibility, signal strength etc.
 - Developed a machine learning pipeline for training several models drone detection based on sound profile.
 - Developed a chrome extension that allows users to upload a selfie and an garment they saw online for a virtual try on using AI image generation and designed for online purchases.
 - Developed a VSCode extension that allows rendering of a coding companion for developers that feel alone
-
